

# SOUTH BOSTON 2050-2070 FLOODING

## COMMENTARY

The intervention proposed is to increase housing density in part of South Boston, in part to provide housing to residents who may be displaced due to flooding caused by climate change and sea level rise. The top image shows the scale of the intervention as well as the projected flooding, which is important because it mainly demonstrates why the intervention is necessary. The below images show the same intersection pre- and post-intervention. Many residents of the current intervention area will likely object to increased density, and the bottom right image demonstrates that the feel of the increased density will not be substantially different from the current feel of the intersection.
